

NAME

cockpit – Cockpit

DESCRIPTION

Cockpit is a web accessible interactive admin interface for Linux machines. Cockpit can usually be accessed on port 9090 of the machine it's installed on. Cockpit starts on demand. Use your system credentials to log in.

COMPONENTS

The **cockpit-ws** web service listens on port 9090 and is started on demand by **systemd**. The Cockpit web service authenticates the user, loads Cockpit into the browser, and starts **cockpit-bridge** in a Linux user session.

The **cockpit-bridge** provides Cockpit in the web browser with access to the system APIs. It does this over its standard in and standard out. The bridge is started like a shell once per Linux user session.

BUGS

Please send bug reports to either the distribution bug tracker or the [upstream bug tracker](#)^[1].

AUTHOR

Cockpit has been written by many [contributors](#)^[2].
